SSAC Annual Report

2013-2014

Prepared by the Species Status Advisory Committee

THE COMMITTEE

The Species Status Advisory Committee (SSAC) was established under the *Endangered Species Act* which was passed on December 13, 2001. Its role is to review and recommend to the responsible Minister on species status designations and re-designations based on the best scientific, traditional and local ecological knowledge available for the species.

MEMBERSHIP

The Act allows for a committee of up to nine members. At the end of the 2013-2014 fiscal year, the committee consisted of six members:

Dr. Christine Campbell (Chair) - Aquatic invertebrates
Dr. Luise Hermanutz - Plant ecology, conservation biology
Dr. Thomas Knight – Freshwater fish, small mammals
Dr. Paul Marino – Mosses, terrestrial invertebrates
Mr. John E. Maunder - General natural history, plants, invertebrates, vertebrates
Dr. William Montevicchi - Birds

Candidates to fill the three vacant positions, with expertise in non-vascular plants/lichens, insects, and/or Labrador region have been identified by the Committee but have yet to be appointed by the Minister.

The secretariat to the SSAC is provided by the Wildlife Division. The role of the secretariat is to help organize meetings and keep minutes, arrange contracts, and provide other necessary logistical support to the Committee. The current secretariat is managed by:

Biodiversity and Endangered Species Program, Wildlife Division
Department of Environment and Conservation
PO Box 2007, 117 Riverside Dr.
Corner Brook, NL, A2H 7S1

THE MINISTER AND THE DEPARTMENT

Responsibility for species at risk, the *Endangered Species Act* and the SSAC rests with the Department of Environment and Conservation. Ministers Tom Hedderson and Joan Shea were responsible for the Department during the period covered by this report.

MEETINGS AND BUSINESS

The Committee met twice in the 2013-2014 fiscal year: April 15, 2013 via conference call and in St. John's on September 24, 2013. Items discussed included the review of draft status reports, the commissioning of status reports and the carrying out of species assessments and associated criteria and standards.

Additional time was spent by members outside the confines of the meetings reviewing and revising status reports, reviewing and developing priority lists, developing plans and reports as required under the *Endangered Species Act* and the *Transparency and Accountability Act*, contacting potential candidates for SSAC membership, and preparing correspondence to the Minister.

PROCEDURES

While every effort is made to convene meetings only when all members can be present, a quorum of 50% + 1 of the membership will be the minimum required to hold a meeting.

Voting on procedural matters is on the basis of a simple majority of members present but, in the event of a status recommendation to the Minister, failing a consensus, a two thirds majority of all members, whether present or not, will be required.

CRITERIA

The criteria for decisions on the level of risk for a species (Endangered, Threatened, Vulnerable, Extinct, or Extirpated) follow those of the federal COSEWIC committee, which in turn are based on those of the International Union for the Conservation of Nature and Natural Resources (IUCN) with minor adjustments for local circumstances and conditions. A copy of the COSEWIC criteria can be found in Appendix 1.

STATUS REPORTS AND PRIORITY LISTS

All finalized SSAC status reports are available on the SSAC website (see address below). The status report template designed by the SSAC is recorded in Appendix 2.

Priority lists are regularly updated and can be found in Appendix 3 and on the SSAC website.

<http://www.env.gov.nl.ca/env/wildlife/endangeredspecies/ssac/index.html>

Reports commissioned in 2009-2010, status in progress

Lichens

- Wrinkled Shield Lichen (*Pannaria lurida* ssp. *russellii*) – field work completed, preparation of final status report on hold pending potential completion of national assessment by the Committee on the Status of Endangered Wildlife in Canada.

Reports commissioned in 2010-2011, revision in progress

Vascular Plants

- Red Pine (*Pinus resinosa*)

Reports commissioned in 2012-2013, assessments completed and final reports submitted in 2013-2014

Vascular Plants

- Mountain Bladder Fern (*Cystopteris montana*)
- Northern Twayblade (*Listera borealis*)

Report commissioned in 2013-2014, assessment expected in 2014-2015

Freshwater Fish

- Mummichog (*Fundulus heteroclitus*)

Priority species identified as requiring additional information

Vascular Plants

- Common Dodder (*Cuscuta gronovii*)
- Menzie's Rattlesnake Plantain (*Goodyera oblongifolia*)
- Hops (*Humulus lupulus* var. *lupuloides*)
- Mermaidweed (*Proserpinaca pectinata*)

Lichens

- Matchstick Lichen (*Pilophorus fibula*)
- Wrinkled Shield Lichen (*Pannaria lurida* subsp. *russellii*)

<http://www.env.gov.nl.ca/env/wildlife/endangeredspecies/ssac/index.html> solicits “Expressions of Interest” for these species.

RECOMMENDATIONS

Eight species recommended to the Minister in 2008-2009 (Alaska Rein Orchid, Bodin's Milkvetch, Cutleaf Fleabane, Oval-leaved Creeping Spearwort, Feathery False Solomon's Seal, Lindley's Aster, Rock Dwelling Sedge, and Vreeland's Striped Coralroot) were listed under the Province's *Endangered Species Act* in 2013-2014.

Recommendations for two species (Northern Twayblade and Mountain Bladder Fern – Newfoundland Designatable Unit) were submitted to the Minister on September 25, 2013; both were assessed as Endangered.

Recommendations made in 2007-2008, government decisions outstanding

Vascular Plants

- Shaved Sedge (*Carex tonsa* var. *tonsa*) - Threatened
- Sharpleaf Aster (*Oclemena acuminata*) - Threatened
- Water Pygmyweed (*Tillaea aquatic*) - Vulnerable
- Tradescant's Aster (*Symphotrichum tradescantii*) Threatened
- Gmelin's Watercrowfoot (*Ranunculus gmelinii*) - Endangered

Recommendations made in 2010, government decisions outstanding

Birds

- Bobolink (*Dolichonyx oryzivorus*) - Vulnerable
- Gray-cheeked Thrush (Newfoundland Subspecies; *Catharus minimus minimus*) – Threatened

Recommendations made in 2012, government decisions outstanding

Vascular Plants

- Griscom's Arnica (*Arnica griscomii* subsp. *griscomii*) - Endangered
- Woolly Arnica (*Arnica angustifolia* subsp. *tomentosa*) – Endangered

THE FUTURE

In most cases status reports for species on the priority lists have to be contracted out to individuals with detailed knowledge about the species under consideration. The number of status reports that can be commissioned and evaluated will depend primarily upon the SSAC budget, author availability and the capacity of the Committee to review and assess the reports. The priority will be to find authors and commission reports for 1-3 new species over the next year. It is anticipated that only a portion of those will be completed and assessed before March 31, 2015.

APPENDICES

- Appendix 1. COSEWIC criteria.
- Appendix 2. Status Report template
- Appendix 3. Taxonomic priority lists
- Appendix 4. Chronology of assessments completed by the Species Status Advisory Committee

Appendix 1.

COSEWIC quantitative criteria and guidelines for the status assessment of wildlife species

	Endangered	Threatened
A. Decline in Total Number of Mature Individuals		
A1. An observed, estimated, inferred or suspected reduction in total number of mature individual over the last 10 years or 3 generations, whichever is the longer, where the causes of the reduction are: clearly reversible and understood and ceased, based on (and specifying) any of the following: (a) direct observation (b) an index of abundance appropriate to the taxon (c) a decline in index of area of occupancy, extent of occurrence and/or quality of habitat (d) actual or potential levels of exploitation (e) the effects of introduced taxa, hybridization, pathogens, pollutants, competitors or parasites.	Reduction of $\geq 70\%$	Reduction of $\geq 50\%$
A2. An observed, estimated, inferred or suspected reduction in total number of mature individuals over the last 10 years or 3 generations, whichever is the longer, where the reduction or its causes may not have ceased or may not be understood or may not be reversible, based on (and specifying) any of (a) to (e) under A1.	Reduction of $\geq 50\%$	Reduction of $\geq 30\%$
A3. A reduction in total number of mature individuals, projected or suspected to be met within the next 10 years or 3 generations, whichever is the longer (up to a maximum of 100 years), based on (and specifying) any of (b) to (e) under A1.	Reduction of $\geq 50\%$	Reduction of $\geq 30\%$
A4. An observed, estimated, inferred, projected or suspected reduction in total number of mature individuals over any 10 year or 3 generation period, whichever is longer (up to a maximum of 100 years in the future), where the time period must include both the past and the future, and where the reduction or its causes may not have ceased or may not be understood or may not be reversible, based on (and specifying) any of (a) to (e) under A1.	Reduction of $\geq 50\%$	Reduction of $\geq 30\%$
B. Small Distribution Range and Decline or Fluctuation		
B1. Extent of occurrence estimated to be	$< 5,000 \text{ km}^2$	$< 20,000 \text{ km}^2$
or		
B2. Index of area of occupancy estimated to be	$< 500 \text{ km}^2$	$< 2,000 \text{ km}^2$
and (for either B1 or B2) estimates indicating at least two of a – c:		
a. Severely fragmented or known to exist at:	≤ 5 locations	≤ 10 locations
b. Continuing decline, observed, inferred or projected, in any of (i) extent of occurrence, (ii) index of area of occupancy, (iii) area, extent and/or quality of habitat, (iv) number of locations or populations, (v) number of mature individuals.		

- c. Extreme fluctuations in any of (i) extent of occurrence, (ii) index of area of occupancy, (iii) number of locations or populations, (iv) number of mature individuals.

C. Small and Declining Number of Mature Individuals

C. Total number of mature individuals estimated to be:

< 2,500

< 10, 000

and one of either C1 or C2:

C1. An estimated continuing decline in total number of mature individuals of at least:

20% within 5 years or two generations, whichever is longer, up to a maximum of 100 years in the future

10% within 10 years or three generations, whichever is longer, up to a maximum of 100 years in the future

or

C2. A continuing decline, observed, projected, or inferred, in numbers of mature individuals

and

a.(i) No population estimated to contain

> 250 mature individuals

> 1000 mature individuals

or

a.(ii) one population has

≥ 95% of all mature individuals

100% of all mature individuals

or

b. There are extreme fluctuations in number of mature individuals.

D. Very Small or Restricted Total Population

D. Total number of mature individuals very small or restricted in the form of either of the following:

D1. Population estimated to have

< 250 mature individuals

< 1000 mature individuals

or

D2.

Does not apply

Index of area of occupancy

For threatened only: Population with a very restricted index of area of occupancy (typically < 20 km²) or number of locations (typically < 5) such that it is prone to the effects of human activities or stochastic events within a very short time period in an uncertain future, and is thus capable of becoming endangered or extinct in a very short time period.

< 20 km²

or

≤ 5 locations

E. Quantitative Analysis

E. Quantitative analysis (population projections) showing the probability of extinction in the wild is at least

20% within 20 years or 5 generations, whichever is longer, up to a maximum of 100 years

10% within 100 years

Special Concern:

Those wildlife species that are particularly sensitive to human activities or natural events but are not endangered or threatened wildlife species.

Wildlife species may be classified as being of Special Concern if:

- (a) the wildlife species has declined to a level of abundance at which its persistence is increasingly threatened by genetic, demographic or environmental stochasticity, but the decline is not sufficient to qualify the wildlife species as Threatened; or
- (b) the wildlife species may become Threatened if factors suspected of negatively influencing the persistence of the wildlife species are neither reversed nor managed with demonstrable effectiveness; or
- (c) the wildlife species is near to qualifying, under any criterion, for Threatened status; or
- (d) the wildlife species qualifies for Threatened status but there is clear indication of rescue effect from extra-limital populations.

Examples of reasons why a wildlife species may qualify for “Special Concern”:

- a wildlife species that is particularly susceptible to a catastrophic event (e.g., a seabird population near an oil tanker route); or
- a wildlife species with very restricted habitat or food requirements for which a threat to that habitat or food supply has been identified (e.g., a bird that forages primarily in old-growth forest, a plant that grows primarily on undisturbed sand dunes, a fish that spawns primarily in estuaries, a snake that feeds primarily on a crayfish whose habitat is threatened by siltation; or a recovering wildlife species no longer considered to be Threatened or Endangered but not yet clearly secure.

Examples of reasons why a wildlife species may not qualify for “Special Concern”:

- a wildlife species existing at low density in the absence of recognized threat (e.g., a large predatory animal defending a large home range or territory); or a wildlife species existing at low density that does not qualify for Threatened status for which there is a clear indication of rescue effect.

Guidelines for use of Extinct or Extirpated

A wildlife species may be assessed as extinct or extirpated from Canada if:

- there exists no remaining habitat for the wildlife species and there have been no records of the wildlife species despite recent surveys; or
- 50 years have passed since the last credible record of the wildlife species, despite surveys in the interim; or there is sufficient information to document that no individuals of the wildlife species remain alive.

Guidelines for use of Data Deficient

Data Deficient should be used for cases where the status report has fully investigated all best available information yet that information is insufficient to: a) satisfy any criteria or assign any status, or b) resolve the wildlife species' eligibility for assessment.

Examples:

- Records of occurrence are too infrequent or too widespread to make any conclusions about extent of occurrence, population size, threats, or trends.
- Surveys to verify occurrences, when undertaken, have not been sufficiently intensive or extensive or have not been conducted at the appropriate time of the year or under suitable conditions to ensure the reliability of the conclusions drawn from the data gathered.
- The wildlife species' occurrence in Canada cannot be confirmed or denied with assurance.

Data Deficient should **not** be used if: a) the choice between two status designations is difficult to resolve by COSEWIC, or b) the status report is inadequate and has not fully investigated all best available information (in which case the report should be rejected), or c) the information available is minimally sufficient to assign status but inadequate for recovery planning or other such use.

Appendix 2.

Status Report Template.

DRAFT

The Status of
[English Common Name]
(*[Scientific Name]* no author or date here)
in Newfoundland and Labrador

[Image of taxon]

prepared for
THE SPECIES STATUS ADVISORY COMMITTEE

by
[Author Name]
[Author Address]

Submitted: [Date]

[Format report exactly as indicated in this template, except where impractical. Arial font; use 12pt for main body of text. Use Canadian English; not American English. Always italicize the Latin term “*et al.*”]

TECHNICAL SUMMARY

[Instructions: Complete the Technical Summary after you have finished the report. Provide one Technical Summary for each proposed designatable unit as well as the species in its entirety within Canada. If the insular Newfoundland situation is significantly different from the Labrador situation, or if populations in the two areas are significantly disjunct, include separate entries for each region.

For the meanings of terms in this Technical Summary, refer to the section entitled Definitions and Abbreviations found on the COSEWIC/COSEPAC website (<http://www.cosewic.gc.ca/>).

Provide requested data and estimations in the right-hand column and relevant auxiliary information in the left-hand column. Replace text within square brackets [] with the information requested (e.g. calculation of extent of occurrence) and remove the brackets. **If there is a range of options specified in the square brackets (e.g., [observed, inferred or projected]) then choose the option(s) that apply.** If details of items in the technical summary are provided in status report text, cite relevant status report section(s). If an item in the technical summary is not applicable (e.g. a quantitative analysis was not done) delete the bracketed text. Delete these two paragraphs of instructions upon completion of the Technical Summary.]

Genus species

English common name

Nom commun français

Range of occurrence in Newfoundland and Labrador:

Demographic Information

Generation time (usually average age of parents in the population; indicate if another method of estimating generation time indicated in the IUCN guidelines(2008) is being used)	yrs
Is there an [observed, inferred, or projected] continuing decline in number of mature individuals?	
Estimated percent of continuing decline in total number of mature individuals within [5 years or 2 generations]	
[Observed, estimated, inferred, or suspected] percent [reduction or increase] in total number of mature individuals over the last [10 years, or 3 generations].	
[Projected or suspected] percent [reduction or increase] in total number of mature individuals over the next [10 years, or 3 generations].	

[Observed, estimated, inferred, or suspected] percent [reduction or increase] in total number of mature individuals over any [10 years, or 3 generations] period, over a time period including both the past and the future.	
Are the causes of the decline clearly reversible and understood and ceased?	
Are there extreme fluctuations in number of mature individuals?	

Extent and Occupancy Information

Estimated extent of occurrence	km ²
Index of area of occupancy (IAO) (Always report 2x2 grid value).	km ²
Is the total population severely fragmented?	
Number of locations*	
Is there an [observed, inferred, or projected] continuing decline in extent of occurrence?	
Is there an [observed, inferred, or projected] continuing decline in index of area of occupancy?	
Is there an [observed, inferred, or projected] continuing decline in number of populations?	
Is there an [observed, inferred, or projected] continuing decline in number of locations*?	
Is there an [observed, inferred, or projected] continuing decline in [area, extent and/or quality] of habitat?	
Are there extreme fluctuations in number of populations?	
Are there extreme fluctuations in number of locations*?	
Are there extreme fluctuations in extent of occurrence?	

* See Definitions and Abbreviations on [COSEWIC website](#) and [IUCN 2010](#) for more information on this term.

Are there extreme fluctuations in index of area of occupancy?	
---	--

Number of Mature Individuals (in each population)

Population	N Mature Individuals
Total	

Quantitative Analysis

Probability of extinction in the wild is at least [20% within 20 years or 5 generations, or 10% within 100 years].

STATUS REPORT

[Full Scientific Name, including author; in general, use the SSAC-specified “designatable unit” (ie. species, subspecies, variety, etc.); however, the report writer may suggest a modification of the specified “designatable unit” if report-based research suggests a better alternative]

[Common Name (English)]; [Common Name (French, aboriginal, and/or local) – if available] [Refine according to the level of “designatable unit” used, if required (ie. Newfoundland Arctic Hare)]

[Name of population(s) (if applicable)]

Synonyms: [Full Scientific Name, including author; list several entries, if applicable; synonyms should be assignable to the “designatable unit” only; clear *errors* should be excluded, but may be discussed in the “Systematic/Taxonomic Clarifications” section]

Family: [Latin Name] [(Common Name)]

Life Form: [examples: “Herbaceous, perennial, amphibious forb”; “Animal, vertebrate, bird, woodpecker” ... there is no exact taxonomy here.].

[Systematic/Taxonomic Clarifications (if required)]

[A systematic/taxonomic clarification may be critical to properly understanding the precise taxon being discussed, and/or to facilitate more precise delimitation of global, national or even provincial distributions.

A brief entry should be inserted here if such is critical to the general understanding of the main text, and to the ability of the reader to assess the status of the species being reported upon.

A more detailed systematic/taxonomic clarification may, nevertheless, be critical to a more comprehensive technical understanding of the subject as a whole; if so, a more detailed entry should be placed in Appendix B.

In some cases, both a brief entry and a more detailed entry may be useful.]

Distribution

Global: (Figure x [if required])

North America (excluding Canada) [if the taxon being reported upon occurs only in Canada, simply state that fact]:

[Country: vertically list country headings: e.g.: United States, Greenland, Mexico, St.-Pierre et Miquelon (France)] [For each country, include a general statement of national distribution, followed by a comprehensive listing of individual states where the taxon being reported upon is found (if applicable), in logical geographical order]

Other Continents or Individual Political Jurisdictions [if required] [vertically list continents, and included countries, where the taxon is found, in logical geographical order]

National [i.e. Canada]: (Figure x) [if required]

[Include a general statement of national distribution, followed by a list of provinces where the taxon is found, in logical geographical order]

Provincial: (Figure x)

[List all known occurrence localities (or, if localities are particularly numerous, list localities more generally), in logical geographical order.]

[List localities separately for Newfoundland, and for Labrador]

[Note any qualifications, and/or discrepancies.]

[In all cases, distribution entries should refer only to the specific “designatable unit” being reported upon; not to the “species as a whole”... unless there is some specific reason for doing so.]

[In all cases, if a taxon is migratory and/or nomadic, distinguish between breeding and wintering/other distributions; if appropriate, also note distribution during the migratory period.]

[In all cases, cite references.]

Annotated Global Range Map [if required; show overall global species range, broken down into lower taxon range units if such exist]

Figure x. Global distribution of [taxon]

Annotated National Range Map [if required; show overall national species range, broken down into lower taxon range units if such exist]

Figure x. National distribution of [taxon]

Annotated Provincial Range Map

[Good quality outline map of Newfoundland and/or Labrador, identifying individual known occurrence localities. If a migratory/nomadic taxon, distinguish between breeding/nesting localities, and other occurrence localities if required. Show overall provincial species range, broken down into lower taxon range units if such exist]

[With regard to St.-Pierre et Miquelon: since the archipelago is geographically part of Newfoundland, it is generally useful to map and discuss SPM distributions as if they were part of the political entity of Newfoundland.]

Figure x. Known occurrence localities for [taxon] in Newfoundland and Labrador:
[List localities.]

[For all maps: if a map is from the literature or from the Internet, obtain written permission to use, and record that permission in the figure caption; otherwise re-draft. Make map symbols large enough to be seen properly; if colours are used, make sure that they are of different enough contrast to be distinguishable in black-and-white printed copies; treat breeding and “other” distributions separately (ie. use different symbols); additionally, for provincial map/s, treat historical and recent distributions, as well as verified and unverified records, separately; if things get too complicated, add additional maps.]

Description

[BRIEFLY describe the organism, in a way that presents a good visual impression to the layperson. If deemed to be useful, a more detailed description, including photographs, may be placed in Appendix B. Obtain permission to use all photos, if necessary, and credit appropriately.]

Habitat

[Briefly describe the habitat. If a migratory/nomadic species, distinguish between breeding/nesting habitats and other occurrence-related habitats. Begin with a general description of habitat throughout the taxon's range. Follow up with a more detailed description of its habitat within Newfoundland and Labrador. If habitat differs significantly between occurrence localities, it may be necessary to describe habitat specifically for each locality. A photo of the organism in its habitat may be useful to include here, if the habitat does not vary too greatly between occurrence localities. Obtain permission to use all photos, if necessary, and credit appropriately. If appropriate, a more detailed description, including photographs, may be placed in Appendix B. For plants, and for aquatic taxa in general, soil and water chemistry may be a particularly important factor. Climatic factors, both micro- and macro- should also be discussed. For smaller organisms, microhabitat/microclimate may be just as significant, or even more significant, than gross habitat/climate.]

Overview of Biology

[Briefly outline life history details, demographic information, generation time, and ecology, *as each is pertinent to conservation*. If appropriate, a more detailed description may be placed in Appendix B.]

Population Size and Area of Occupancy

[Briefly describe present population size, and area of occupancy [make sure you understand the definition of "area of occupancy"], for each Provincial occurrence locality, where this is possible. Where populations are dispersed, a direct calculation of AO may not be possible; however, in some cases, proxies may be useful, such as the estimated total area of several individual territories or home ranges. A general statement addressing the entire/larger range of the taxon may also be useful. For migratory and/or nomadic taxa, the population size and area of occupancy entries may need specific comment. Briefly discuss methodologies for arriving at the figures presented, where applicable. Information could be provided in table format if appropriate. Ensure that the information from this report section both documents and agrees with that also placed in the technical summary, and in other related report sections. Please consult the instructions for calculating IAO included in the author package.]

Aboriginal, Traditional and Local Ecological Knowledge

[Outline any known applicable aboriginal, traditional and/or local ecological knowledge. The report writer is responsible for contacting local aboriginal resources.]

Trends

[Describe known trends in distribution, population, and habitat. If sufficient data are available, a graphical figure should be included. Ensure that the information from this report section both documents and agrees with that also placed in the technical summary, and in other related report sections.]

Threats and Limiting Factors

[Outline actual or imminent threats and limiting factors affecting populations or habitats; if a taxon is migratory and/or nomadic, also treat threats and limiting factors within breeding versus wintering/other distributions separately; if appropriate also note threats and limiting factors during the migratory/nomadic period. Briefly indicate scale and immediacy of threats. A RENEW Threat Assessment Table, which ranks threats by value, may be useful. Describe any additional potential threats. Consider threats to the taxon in all parts of its range and life cycle. Briefly present the results of any available Population Viability Analysis (PVA). A more detailed analysis may be placed in Appendix B.]

[If “critical habitat” (habitat necessary for the survival of the species) is identified/identifiable, include description and provincial location. Any precise location information should be placed in Appendix A.]

Existing Protection

[Outline existing protection; including occurrence in protected or management areas, or under stewardship agreements.]

Special Significance

[Outline any known scientific or cultural significance of the taxon.]

Cited References

[Provide a complete list of literature and/or similar references that are cited either within the main text or within any of the included appendices. List references with a space between each, using hanging indents.

Appendix A. Population Information

[This appendix contains population-related information in support of the main report. The main report should reference entries in Appendix A, with the exception of detailed maps.]

Recently Verified Occurrences/Range Use (recorded within the last 25 years)

[Verified occurrences consist of observations supported by the collection of a voucher specimen (i.e., a sample to be identified/confirmed by experts and deposited in a museum); or well-documented, diagnostic, photographs; or well-documented field observations meeting the observational standards for verification accepted by reputable workers in any particular field (this is particularly relevant to bird or mammal field observations). Note: records from databases or Internet listings may or may not qualify as “verified” records; knowledgeable judgment is required here; when in doubt, such records should be included in the “Other Observations ...” section.]

[For all occurrence records, where data is available: note [1] dates of observation/collections, [2] general and specific occurrence localities (including lat/long or UTM coordinates (specify datum), where available), [3] habitat, [4] estimates of population size and area of occupancy (where available), [5] observer and/or collector, and [6] collection/museum catalogue number and/or photo reference (if applicable). Where detailed information is available, and where practical, records should be listed by individual site. Otherwise, or in addition, the records may be compiled into one or more summarizing tables.]

[List Newfoundland records separately from Labrador records; also separate St.-Pierre et Miquelon records, if included.]

Historical Verified Occurrences/Range Use (recorded prior to the last 25 years)

[For all occurrence records, where data is available: note [1] dates of observation/collections, [2] general and specific occurrence localities (including lat/long or UTM coordinates (specify datum), where available), [3] habitat, [4] estimates of population size and area of occupancy (where available), [5] observer and/or collector, and [6] collection/museum catalogue number and/or photo reference (if applicable). Where detailed information is available, and where practical, records should be listed by individual site. Otherwise, or in addition, the records may be compiled into one or more summarizing tables.]

[List Newfoundland records separately from Labrador records; also separate St.-Pierre et Miquelon records, if included.]

Other Observations (Unverified)

[While unverified, all records listed here should, nevertheless, be considered to be basically credible. May include some or all records from databases and internet lists; see additional comments above]

[For all occurrence records, where data is available: note [1] dates of observation/collections, [2] general and specific occurrence localities (including lat/long or UTM coordinates (specify datum), where available), [3] habitat, [4] estimates of population size and area of occupancy (where available), [5] observer and/or collector, and [6] collection/museum catalogue number and/or photo reference (if applicable). Where detailed information is available, and where practical, records should be listed by individual site. Otherwise, or in addition, the records may be compiled into one or more summarizing tables.]

[List Newfoundland records separately from Labrador records; also separate St.-Pierre et Miquelon records, if included.]

Recent Search Effort (areas searched within the last 25 years with estimate of effort)

[A comprehensive accounting of the efforts of earlier researchers, and, if applicable, any additional efforts by the author of the report.]

Potential Sites Unexplored

[Analysis of the potential of as yet unexplored sites to harbour the taxon being reported upon.]

Appendix B. Supplementary Details

[This appendix should contain all supplementary details that are considered to be useful additional background support for the main report (other than population-related information, which should be placed in Appendix A). The main report should contain ONLY information that is critically required for actually assigning species status. The main report should reference entries included in Appendix B.]

Taxonomic Clarifications

[Detailed entry, if required]

Description

[Detailed entry, if required. Photos if required.]

Habitat

[Detailed entry, if required. Photos if required.]

Biology

[Detailed entry, if required]

Threats and Limiting Factors

[Detailed entry, if required. Include precise or sensitive information about critical habitat.]

Collections Examined

[Detailed entry, if required. Indicate museum/institutional collections, and catalogue/collection numbers.]

[Additional entries, as appropriate]

Appendix 3.

SSAC Lichen Priority List

The lichen species listed below are those considered to be most in need of the completion of SSAC species status reports. The order of the list represents relative priority of each species.

<i>Pannaria lurida</i>	Wrinkled Shield Lichen
<i>Pilophorus fibula</i>	Matchstick Lichen
<i>Degelia plumbea</i>	Leaden Lichen
<i>Parmeliopsis esorediata</i>	Mountain Birch Lichen*
<i>Pseudocyphellaria perpetua</i>	Yellow Specklebelly Lichen

*common name in Norwegian, no common name has been identified for this species in North America.

SSAC Vascular Plant Priority List

The vascular plant species listed below are those considered to be most in need of the completion of SSAC species status reports. On the Island of Newfoundland, all are known to occur at only one recent general locality, all are extremely rare, and all are particularly vulnerable. Three of the species [*] also occur sparingly in Labrador.

<i>Botrychium ascendens</i>	Ascending Moonwort
<i>Botrychium lanceolatum</i> subsp. <i>lanceolatum</i> *	Lanceleaf Grapefern
<i>Carex radiata</i>	Eastern Starsedge
<i>Cuscuta gronovii</i>	Common Dodder
<i>Dryopteris marginalis</i>	Marginal Woodfern
<i>Eleocharis erythropoda</i>	Bald Spikerush
<i>Goodyera oblongifolia</i>	Menzie's Rattlesnake Plantain
<i>Humulus lupulus</i> var. <i>lupuloides</i>	Hops (native variety)
<i>Potamogeton strictifolius</i>	Narrowleaf Pondweed

Note: The above list is presented in alphabetical order and in no way represents the relative priority of each species.

SSAC Freshwater Fish Priority List

<i>Fundulus heteroclitus</i>	Mummichog
------------------------------	-----------

Note: A status report has been drafted for this species and is under review.

SSAC Mosses Priority List

A preliminary list has been prepared but needs to be revised prior to public release.

SSAC Amphibian Priority List

No species identified at this time

SSAC Bird Priority List

No species identified at this time

SSAC Invertebrate Priority List

List on hold until adequate information available

SSAC Mammal Priority List

No species identified at this time

Appendix 4

Chronology of Assessments by the Species Status Advisory Committee

Common Name	Scientific Name	SSAC Assessment	Date of Recommendation:	Decision from Government Required By:**	Designated Status or Reason Not Designated:
Low Northern Rockcress	<i>Neotorularia humilis</i>	Endangered	6-Oct-04		Endangered
Gray-cheeked Thrush Reassessed June 21, 2010	<i>Catharus minimus</i>	Vulnerable	4-Nov-05		Vulnerable
Northern Wheatear	<i>Oenanthe oenanthe leucorhoa</i>	Not at Risk		No recommendation required.	
Caspian Tern	<i>Sterna caspia</i>	Not at Risk		No recommendation required.	
Redwine Caribou Herd	<i>Rangifer tarandus caribou</i> (Redwine Population)			SSAC has decided not to assess populations but species as a whole. This assessment was never completed.	
Blowout Tiger Beetle	<i>Cicindela limbata labradorensis</i>	Data Deficient		Status report being revised due to new information.	
MacKenzie's SweetVetch	<i>Hedysarum boreale</i> subsp. <i>mackenzii</i>	Endangered	21-Oct-06		Endangered
Rattlesnakeroot	<i>Prenanthes racemosa</i>	Endangered	21-Oct-06		Endangered
Northern Bog Aster	<i>Symphyotrichum boreale</i>	Endangered	21-Oct-06		Endangered
Crowded Wormseed Mustard	<i>Erysimum inconspicuum</i> var. <i>coarctatum</i>	Endangered	21-Oct-06		Endangered
Mountain Fern	<i>Thelypteris quelpaertensis</i>	Vulnerable	21-Oct-06		Vulnerable
Graceful Felt Lichen	<i>Erioderma mollissimum</i>	Endangered	8-May-08		Endangered
Bodin's Milkvetch	<i>Astragalus bodinii</i>	Threatened	29-May-08		Threatened
Shaved Sedge	<i>Carex tonsa</i> var. <i>tonsa</i>	Threatened	29-May-08	29-Aug-08	Response overdue
Cutleaf Fleabane	<i>Erigeron compositus</i>	Endangered	29-May-08		Endangered
Feathery False Solomon's Seal	<i>Maianthemum racemosum</i> subsp. <i>racemosum</i>	Endangered	29-May-08		Endangered
Sharpleaf Aster	<i>Ocelmena acuminata</i>	Threatened	29-May-08	29-Aug-08	Response overdue
Alaska Rein Orchid	<i>Platanthera foetida</i>	Endangered	29-May-08		Endangered
Gmelin's Watercrowfoot	<i>Ranunculus gmelinii</i>	Endangered	29-May-08	29-Aug-08	Response overdue
Tradescant's Aster	<i>Symphyotrichum tradescantii</i>	Threatened	29-May-08	29-Aug-08	Response overdue
Water Pygmyweed	<i>Tillaea aquatica</i>	Vulnerable	29-May-08	29-Aug-08	Response overdue
Rock Dwelling Sedge	<i>Carex petricosa</i> var. <i>misandroides</i>	Endangered	29-May-08		Endangered
Oval-leaved Creeping Spearwort	<i>Ranunculus flammula</i> var. <i>ovalis</i>	Endangered	29-May-08		Endangered
Lindley's Aster	<i>Symphyotrichum ciliolatum</i>	Endangered	07-Oct-10		Endangered

Appendix 4: Chronology of Assessments by the Species Status Advisory Committee (continued)

Common Name	Scientific Name	SSAC Assessment	Date of Recommendation:	Decision from Government Required By:** "	Designated Status or Reason Not Designated:
Arctic Hare	<i>Lepus arcticus</i>	Data Deficient		No recommendation required.	
Bobolink	<i>Dolichonyx oryzivorus</i>	Vulnerable	07-Oct-10	07-Jan-11	Response overdue
Bank Swallow	<i>Riparia riparia riparia</i>	Not at Risk		No recommendation required.	
Yellow-bellied Sapsucker	<i>Sphyrapicus varius</i>	Data Deficient		No recommendation required.	
Vreeland's Striped Coralroot	<i>Corallorhiza striata</i> var. <i>vreelandii</i>	Endangered	07-Oct-10		Endangered
Gray-cheeked Thrush (Newfoundland subspecies)	<i>Catharus minimus minimus</i>	Threatened	07-Oct-10	07-Jan-11	Response overdue
Gray-cheeked Thrush (Northern subspecies)	<i>Catharus minimus aliciae</i>	Not at Risk		No recommendation required	
Woolly Arnica	<i>Arnica angustifolia</i> subsp. <i>tomentosa</i>	Endangered	22-Oct-12	22-Jan-13	Response overdue
Griscom's Arnica	<i>Arnica griscomii</i> subsp. <i>griscomii</i>	Endangered	22-Oct-12	22-Jan-13	Response overdue
Northern Twayblade	<i>Listera borealis</i>	Endangered	25-Sep-13	25-Sep-14	
Mountain Bladder Fern (Newfoundland Designatable Unit)	<i>Cystopteris montana</i>	Endangered	25-Sep-13	25-Sep-14	

**The Lieutenant-Governor in Council shall within 90 days of the minister receiving a written recommendation from SSAC to designate a species, give the minister approval to do one of the following: (a) designate the species under section 7 in the recommended or an equivalent category; (b) designate the species under section 7 in a different category and release to the public the reason for using a different category; or (c) make no designation and release to the public the reason there will be no designation. Section 8 of the Endangered Species Act.

Based on the legislated timeline above, a decision from Government is overdue.
